

Premier Medical Necessity Version 8.8 Release Notes

PREMIER SOFTWARE ASSOCIATES
997 West 950 North Suite 200
Centerville, Utah 84014
(801) 299-8772

INTRODUCTION:

Premier Software Associates is pleased to announce the release of version 8.8 of Medical Necessity. This release includes updates, software modifications and fixes to the Medical Necessity software V8.7.

The remainder of this document will outline the updates made to the product for this release.

PREREQUISITES:

You must be on Medical Necessity version 8.7 to install this release.

OVERVIEW:

This release contains an enhancement to show all 60 characters of the ICD10 code description instead of just the first 25. With ICD9 codes, the first 25 characters was sufficient in determining the description meaning. However, this is not the case regarding ICD10 codes.

Main Functional Enhancements:

Function or Screen	Description	Comments
ICD10 Search	Allows for ICD10 searching. By code, description and charge. Increase Description.	Increasing the description required the removal of the Search index column. However, the beginning search of the page was added to the top of the screen.

Objects included in this release

A. The following table shows the objects included in this release and the reason for their inclusion.

Fix/Enhance	Object	Comments
Enhance	MNICD10P MNICD10P1 MNICD10SP	Increased Description field from 25 - 60
